Slip Ratings Defined

R11

The 'R' rating is given as what is called a SHOD Test. When wearing Boots, it is the point at which it is likely to cause slip.

'R11' is somewhere between 19-26 degrees

19-26°

An R11 will achieve between 34-51 on a PTV Test

A+B+C

This is a BAREFOOT TEST

e.g. in wet areas, swimming pool areas, patios etc.

A = 12-17 degrees

B = 18-23 degrees

C = 24+ degrees

Again the above ratings are the degrees at which point it is likely to cause slip.

A 12-17°

B 18-23°

C 24° plus

Our TRUE R11 meets more specification than others in the market place
